SUMMARY

Senior backend engineer with 15 years building distributed systems for Brazilian fintech, e-commerce and marketplaces. Currently designing API governance and observability for a financial platform handling 35M+ requests/month (~2TB). Track record of driving change across squads: 60% cloud cost reduction (~US\$18k/month), 240+ high and critical vulnerabilities eliminated, and latency cut from 1000ms to 200ms on a high-traffic quoting path. Deep Kotlin and JVM background, reactive systems with Spring WebFlux, event-driven architecture on Kafka, AWS and GCP.

SKILLS

Languages: Kotlin, Java, TypeScript, C#.NET, SQL

Frameworks: Spring Boot, Spring WebFlux, Project Reactor, Spring Cloud, Spring Data, Hibernate/JPA, Node.js, NestJS, GraphQL

Architecture: Microservices, event-driven architecture, hexagonal architecture, clean architecture, REST API design, API governance, circuit breakers and resilience patterns, design patterns

Cloud & Infra: AWS (EC2, RDS, Lambda), GCP, Docker, Kubernetes, Terraform, Serverless, Apigee, Gradle, Jenkins, GitHub Actions

Data & Messaging: Apache Kafka, RabbitMQ, PostgreSQL, MySQL, MongoDB, DynamoDB, query optimization

Observability: New Relic, Datadog, Prometheus, Kibana, Opsgenie, on-call and incident response

Quality & Security: JUnit, Mockito, MockK, Kotest, TDD, test automation, SAST, Dependabot, Docker image hardening, JWT, SSO

Practice: FinOps and cloud cost optimization, technical leadership, mentoring, technical interviewing, AI-assisted development with coding agents, Agile/Kanban

EXPERIENCE

Senior Backend Engineer (Software Specialist II) — Grupo Boticário

Digital Financial Products | August 2024 – Present | Remote, São Paulo, Brazil

- Identified a critical observability blind spot across 6+ fragmented third-party integrations (WhatsApp, phone, web, backend processors) processing 35M+ requests/month (~2TB) with no unified visibility. Designed a serverless API governance pipeline using Apigee, Kafka, New Relic and GCP, consolidating data across post-sales, product and data teams — enabling proactive alerting that cut customer-facing incidents and surfacing behavioural insights that drove an 80% reduction in unfinished debt-recovery contracts, recovering ~R\$1M/year.
- Led a cross-squad FinOps initiative across 4 squads running over-provisioned EC2 and RDS: introduced Kubecost, AWS Cost Calculator and internal dashboards to right-size infrastructure, negotiated architectural changes with Tech Managers and coached developers. 60% reduction in cloud costs across dev, staging and production — ~US\$18k/month (R\$1.1M/year).
- Led security hardening across the same 4 squads, addressing 300+ unresolved high and critical vulnerabilities: implemented SAST tooling, GitHub Dependabot and Docker image hardening, and negotiated prioritisation with Tech Managers. Eliminated 240+ vulnerabilities — an 80% reduction — hitting the value stream's OKR.

Senior Backend Engineer (Software Specialist II) — Grupo Boticário

Marketplace Seller Support | January 2024 – July 2024 | Remote, São Paulo, Brazil

- Designed and built the Seller Center notifications module, automating communication for critical seller actions across a marketplace serving ~3,000 sellers: 30% faster issue resolution and 25% fewer support tickets.
- Designed and implemented the Seller Center FAQ module with dynamically managed help content and relevance-based search, reducing support tickets for common questions by 60%.

Senior Backend Engineer (Software Specialist II) — Grupo Boticário

Marketplace-Out | February 2023 – December 2023 | Remote, São Paulo, Brazil

- Optimised dynamic quoting, cutting response time from 1000ms to 200ms by isolating bottlenecks in both application code and infrastructure.
- Hardened marketplace partner integrations with circuit breakers and fallbacks, reducing cost and surfacing inconsistencies earlier.
- Acted as security champion for the squad, handled on-call duties for production incidents, and delivered internal talks on Spring Reactor and GraphQL.

Senior Backend Engineer (Software Specialist II) — Grupo Boticário

Marketplace-In Consumer | March 2022 – January 2023 | Remote, São Paulo, Brazil

- Built the module connecting sellers to internal backoffice tools, enabling the platform to scale from 5 to approximately 3,000 sellers with fast issue turnaround.
- Advocated for and led the adoption of GraphQL across the value stream.

Senior Backend Engineer — PicPay

Open Banking | June 2021 – February 2022 | São Paulo, Brazil

- Designed and built Open Banking consent management systems, integrating with leading financial institutions' APIs under strict data-security requirements.
- Acted as technical lead: hexagonal architecture, pair programming, test automation, TDD and design patterns; mentored new developers and served as a technical interviewer.

Senior Software Engineer — Zup Innovation

November 2020 – June 2021 | São Paulo, Brazil

- Led implementation of credit card product recommendation systems, significantly increasing card acquisition rates.
- Supported the team's transition from Java to Kotlin.

Senior Software Engineer — C6 Bank

October 2019 – November 2020 | São Paulo, Brazil

- Built Salesforce CRM integrations that reduced service time by up to 30%.
- Co-developed the payment machine acquisition system, increasing conversion rates.
- Integrated chatbot APIs, reducing response times and the need for human intervention.

Senior Backend Engineer — Ame Digital

September 2018 – April 2019 | São Paulo, Brazil

- Led the refactoring of the monolithic wallet service into microservices, specialising the wallet for movement registration.
- Rebuilt hot paths using Spring WebFlux and reactive programming — during Black Friday this absorbed the same request volume with 30% fewer machines.

EARLIER EXPERIENCE

Senior Java/.NET Software Developer — Objective Solutions | Apr 2019 – Oct 2019 | Brazil

Delivered high-performance accounting reports supporting a client's core financial reporting stack.

.NET / Java Backend Developer — Invillia | Jun 2017 – Sep 2018 | Araras, Brazil

Redesigned backoffice and fraud-detection applications; built a data-bureau response cache saving ~50% on API query costs; split a monolithic anti-fraud module into microservices, moving releases from bi-weekly to on-demand.

Senior .NET / Java Developer — SergipeTec | Nov 2014 – Jun 2017 | Aracaju, Brazil

Led .NET standards adoption (30% efficiency gain, 25% fewer bugs); built internal libraries and a private NuGet server (40% less development time); modularised systems (50% faster deploys) and implemented SSO (60% fewer auth issues).

Software Developer — ITConsulting | Jun 2013 – Jul 2014 | Aracaju, Brazil

Built a resume submission and management platform integrated with HR systems (30% more efficient candidate data handling); helped design a public-services process management system projected to serve 5,000+ citizens/month.

Consultant Developer — ThoughtWorks | Jan 2013 – Apr 2013 | Porto Alegre, Brazil

Improved faceted search and result relevance for a US e-commerce client with Apache Solr and Lucene. Search was 2% of traffic but 60% of conversion; the work delivered a measurable lift in conversion and sales.

Junior Java Software Developer — INFOX Tecnologia | Nov 2010 – Dec 2011 | Aracaju, Brazil

Developed automations for the Brazilian Electronic Judicial Process (PJ-e), cutting processing time; contributed to the SIDAGRO application redesign.

EDUCATION

Postgraduate Degree, Development Leadership — FIAP | June 2024 – April 2025

Postgraduate Degree, Distributed Software Architecture — PUC Minas | March 2022 – October 2023

BSc Computer Science — Universidade Federal de Sergipe | 2006 – 2010
